EDUCATION

CENTENNIAL COLLEGE

TORONTO, Canada

Software Engineering Technician

Jan. 2021 - Present

- Bachelor of **Computer Science**
- Cumulative GPA: 2.0/4.5

TEAM PROJECT

Group Work of Centennial College Canada

Toronto,

Account System (C#)

April. 2022 – April. 2022

- Account management system as an alternative assignment for exams during school classes
 - Using basic language tools to gain knowledge of basic C#
 - Consisted of four people, showing the deposit and withdrawal of money, and showing examples of exceptional errors
 - The project was carried out during the COVID-19 season, so team members from each country communicate and work using the ‘discord channel’

StayFolio Clone Project (Justcode BootCamp Team Project)

Seoul, Korea

Front-end & Back-end (Full stack)

June.20. 2022 - June.31. 2022

- Formed a team and participated as a Full stack developer
 - Functional implementation based on the design of ‘stayfolio’ accommodation reservation site
 - 5 people teamed up, all in a full stack, collecting data and organizing web pages based on that data
 - Create a custom calendar using the moment library among the libraries used by ‘react’ to make it look as similar as possible to an existing website

Pinterest Clone Project (Justcode BootCamp Team Project)

Seoul, Korea

Front-end (HTML, styled-component, Javascript, React)
2022

July.11. 2022 - July.29.

- Formed a team and participated as a Front-end developer
 - Functional implementation based on the design and planning of the ‘pinterest site’
 - A total of 5 team members are divided into 3 front-end and 2 back-end, and the front-end personnel organize the web page into ‘login page, main page, my page, user and border page’
 - Membership registration and general login, and furthermore, social login using Kakao API is implemented

INDIVIDUAL WORK

Creating a portfolio site(Based on vscode)

Seoul, Korea

Front-end (HTML, css, Javascript, React)

Jan.08. 2023 – Feb.20. 2023

- Based on the visual studio code design familiar to developers, a portfolio site where visitors can view introductions, personal works, blogs, etc.
- To show my works as much as possible, get JSON data and RSS XML data to show my existing work, and attach a recording link
- Create an Email API using Email JS so that can receive and view mail in up to 1 day without having to use a separate mail window

RELATED WORK EXPERIENCE

FrontEnd Developer (ohohchilpalgu Inc).

Seoul, Korea

Front-end (HTML, css, Javascript, React, Bubble.io)

Sep.25. 2023 – Present

- Site structure design, web creation, and data generation
- Create an upgraded version of a site called weeks52 that offers beneficial lectures to prospective applicants
- Create a lecture-providing site for the subscription system in cooperation with the Office of Education
